In the Claims:

1. (currently amended) A device adapted to be installed on a rim of a cistern of and
~~used with a toilet bowl or other sanitary appliance~~ which device provides for the
delivery of a treatment composition to the cistern ~~toilet bowl or other sanitary~~
~~appliance~~, which contains one or more active agents such as a coloring agent,
cleaning agent, disinfecting agent, and/or an anti-lime scale agent or a mixture of
two or more of these agents, while simultaneously providing a continuous
fragrancing effect to the ambient environment of the cistern ~~sanitary appliance~~,
wherein the device includes:
 - (a) a first dispenser for containing a treatment composition, which first
dispenser is immersed in water contained within the cistern between flushes of the
toilet bowl and permits for passage of water contained within the cistern ~~sanitary~~
~~appliance~~ into and out of contact with the first dispenser containing said
treatment composition and with said treatment composition;
 - (b) a second dispenser for containing a fragrancing composition, which,
during the use of the device, the fragrancing composition is exterior of the cistern
and desirably does not contact water in the cistern ~~sanitary appliance~~, and
 - (c) a hanger intermediate to and connecting the first dispenser to the
second dispenser wherein said first dispenser is separate from the said second
dispenser, which hanger is adapted for removably hanging the device upon a
portion of the rim of the cistern ~~toilet bowl or other sanitary appliance~~.
2. (original) A device according to claim 1 wherein the first dispenser comprises a
sidewall having at least one perforation passing through said sidewall.
3. (original) A device according to claim 1 wherein the second dispenser comprises a
cavity containing a fragrance composition.

4. (previously presented) A device according to claim 1 wherein the hanger is flexible.
5. (previously presented) A device according to claim 1 wherein the hanger includes a bridge section having two downwardly depending legs.
6. (previously presented) A device according to claim 1 wherein the hanger includes a bridge section having two downwardly depending legs having different lengths.
7. (previously presented) A device according to claim 1 wherein the treatment composition is in the form of a solid block.
8. (previously presented) A device according to claim 1 wherein the treatment composition is in the form of a gel.
9. (canceled)
10. (currently amended) A process for delivering a treatment composition to the interior of a cistern of sanitary appliance, particularly a toilet bowl, which process comprises the process steps of:
providing a device according to claim 1, and installing the device upon the cistern within or upon at least a portion of a sanitary appliance such that the said treatment composition of the first dispenser is immersed within ~~contacts~~ water contained within the cistern between flushes of the toilet bowl sanitary appliance, while the second dispenser continuously provides a fragrancing effect to the ambient environment of the toilet bowl sanitary appliance.
